Dear Sir:

On January 9, 2006, Timothy Brown, James Housel, Christine Lekutis, and Eric Furman discussed proposed Claims 56-63, submitted to the Office on January 5, 2006. The draft claims were found to overcome the enablement and anticipation rejections of record but the Office requested that the claims require that the addition of nucleotides that encode an acidic amino acid reduce the isoelectric point of the heterologous antigen encoded by the first nucleic acid below 7.0. The Office also requested that Applicants indicate that one of skill in the art given the teachings of the application, the knowledge of the art at the time of filing and without undue experimentation would appreciate the amino acids of the hepadnavirus core antigen that can be

mutated without disrupting assembly of the particle. Applicants understood that upon providing the above-referenced limitation and evidence an allowance of the claims would be given.
